

# Weekly Report

Samuel Hunter

Week 33, 23 August 2010

## Summary of activities since last meeting

### Activities

- Discovered a fault with my code that caused an older version of apache to crash. (recursive include that used up all the sites allocated memory and then caused it to crash)
- Finished Course work (All DPP pracks done, RTM prac half done)
- Updated my website again, made it look slightly better and added progress presentation

## Goals and Work targets

### Goals for this week

- Start development again and fix and refactor all minor problems that are left so that next week I can implement and finish the main tasks, remaining in the dashboard.

### Goals Achieved

- Did fix minor problems, but not all of them

### Proposed goals for next week

- Strong focus on development next week, (this week) try and get everything done or as far as possible
- Write another 6 pages of my thesis (for the Design section)

## Rate your work performance

How did you feel you worked ?

Worked well, been feeling very productive the last week.

Did you achieve all your goals ? if not why not?

Almost, I would have liked to have done a bit more on my dashboard, finished all my course work (except for the RTM prac which still needs a little bit of work)

What were the issues you had trouble with?

I got stuck on some really stupid php mistakes, but finally realised what I was doing wrong

What assistance did you need to continue?

Better error messaging from php, its not going to happen.

How can you improve your performance?

Not really.

Provide a rating out of 10 in addition to the above.

8.0

## Tasks/Learning

What is the most useful/interesting thing you learned or did this week?

- I read up on metasploit and worked through some tutorials.
- Worked some nice recursion into a php application.
