

Veterinary Expert System for Remote Use

Stephen Carse

Supervisor: Dr Karen Bradshaw

Recap: My Expert System

- Veterinary diagnosis expert system
- Mobile interface
 - Accessible in remote areas
- Possible extensions
 - Mechanism for addition of further knowledge
 - Feedback taken into account by the system

Focus on Cattle

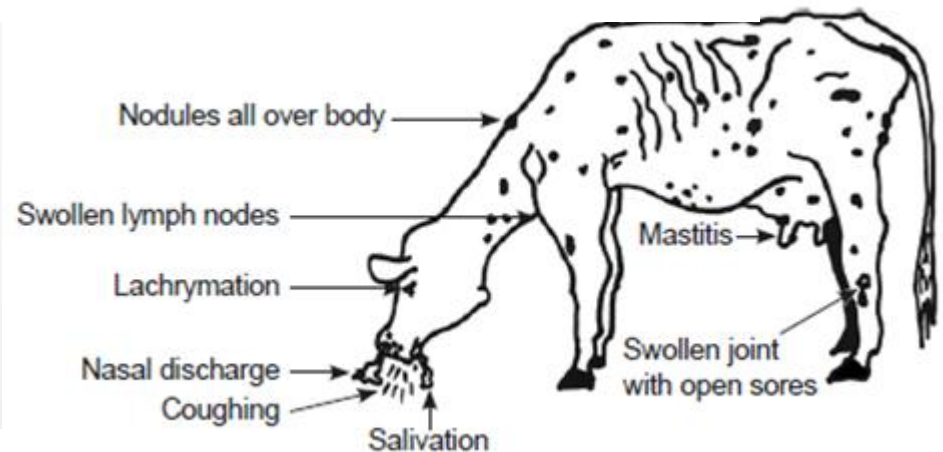

- Aim to avoid encroaching on vets' place
- Many developing farmers, rural people are owners of cattle
- Grahamstown's streets demonstrative of this
- **Provide a basic diagnostic resource to people who would otherwise be unable/struggle to consult a vet**

Knowledge Source

- National Department of Agriculture publications ('InfoPaks')
 - Freely available
 - Aimed at developing farmers
 - Introductory point for basic animal health
 - No jargon or complex terms and language

Sick animals

- There are two types of redwater, namely Asiatic redwater and African redwater
- Asiatic redwater is the more serious disease, although African redwater is probably more important as it is more widely spread. The signs are the same, although nervous signs also occur with Asiatic redwater
- Fever (40-41,5 degrees C)
- Pale to yellow eyes and gums
- Red-coloured urine
- With Asiatic redwater there could be nervous signs, with difficulty in walking and convulsions (can look like heartwater)
- Death
- Calves are resistant for the first 6 to 9 months of life

These animals were not vaccinated and are now sick. This spells disaster for the farmer and his herd

These animals have been vaccinated and are protected. The farmer will benefit economically from his cattle

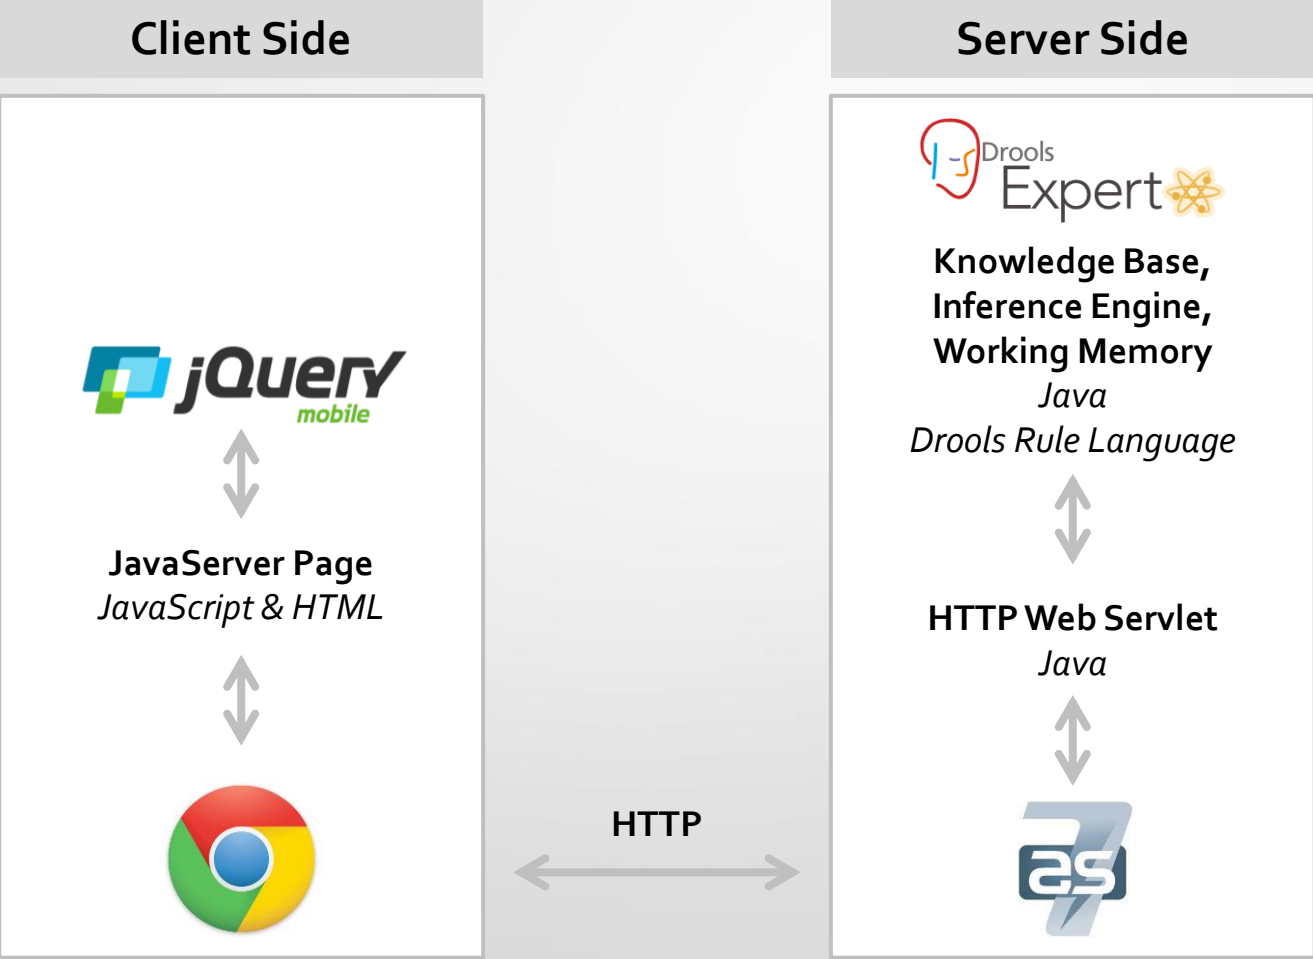

Typical Information

- Basic info about disease, how it affects livestock
- Which animals it affects & susceptibility factors
- Factors affecting likelihood
- Means of infection
- Possible symptoms
- Means of diagnosis
- Similar diseases
- Treatment and vaccination

Diagnostic Process

- Basic information about cow
- Immunity, Vaccination, Other ill cattle
- Broad symptoms
- 
- Query symptoms
- 
- Diagnosis

Developed System

User-Interface

CDS

How old is this cow? (years):

And months of age? (If you are unsure, select 0 or an approximation. It is primarily important if the cow is less than a year old):

Sex:

Female Male

Does this cow produce milk?

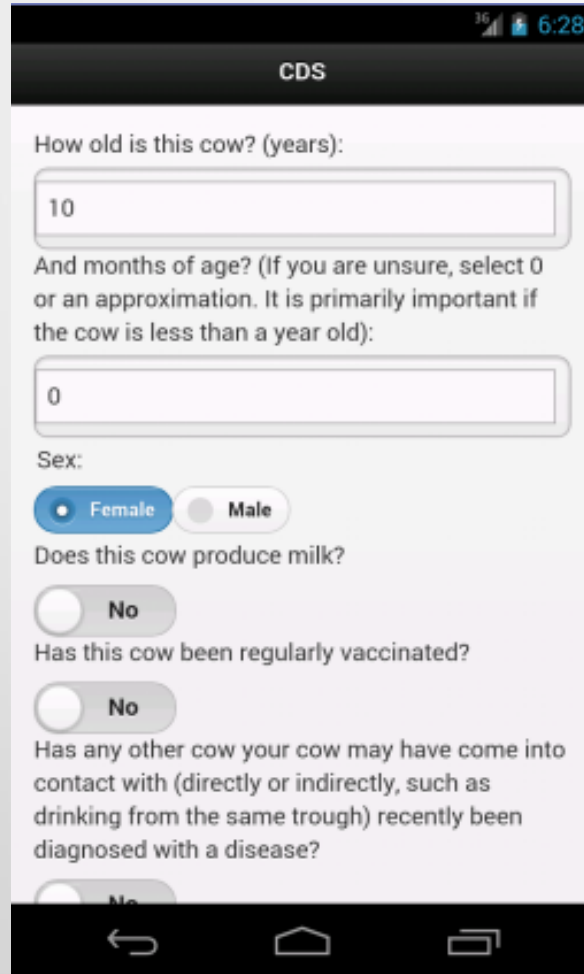

No

Has this cow been regularly vaccinated?

No

Has any other cow your cow may have come into contact with (directly or indirectly, such as drinking from the same trough) recently been diagnosed with a disease?

No

the cow is less than a year old):

Sex:

Female Male

Does this cow produce milk?

No

Has this cow been regularly vaccinated?

No

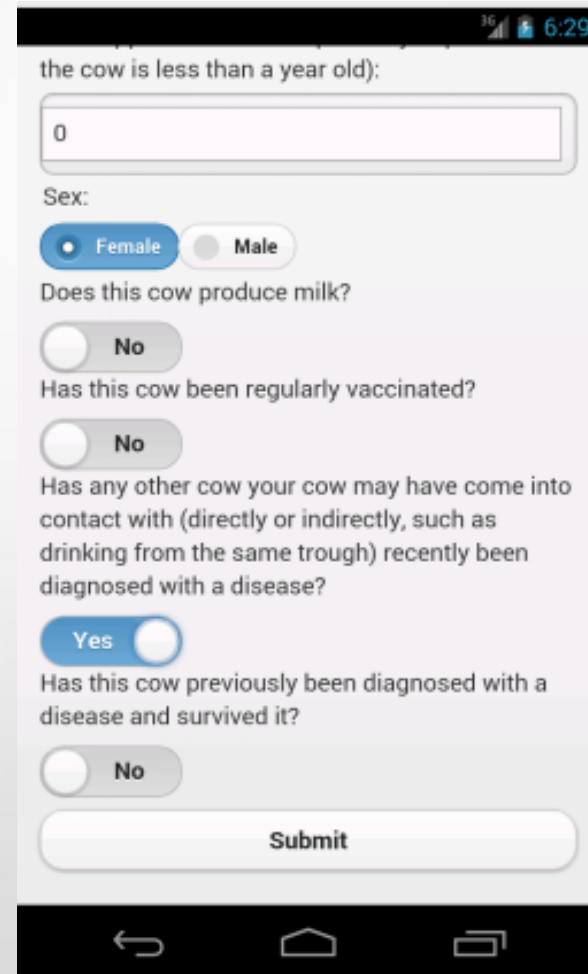

Has any other cow your cow may have come into contact with (directly or indirectly, such as drinking from the same trough) recently been diagnosed with a disease?

Yes

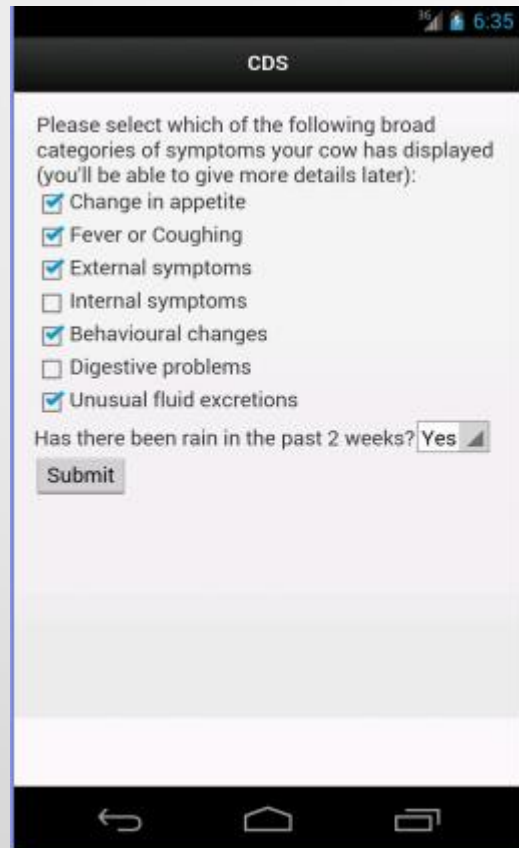

Has this cow previously been diagnosed with a disease and survived it?

No

Submit

User-Interface

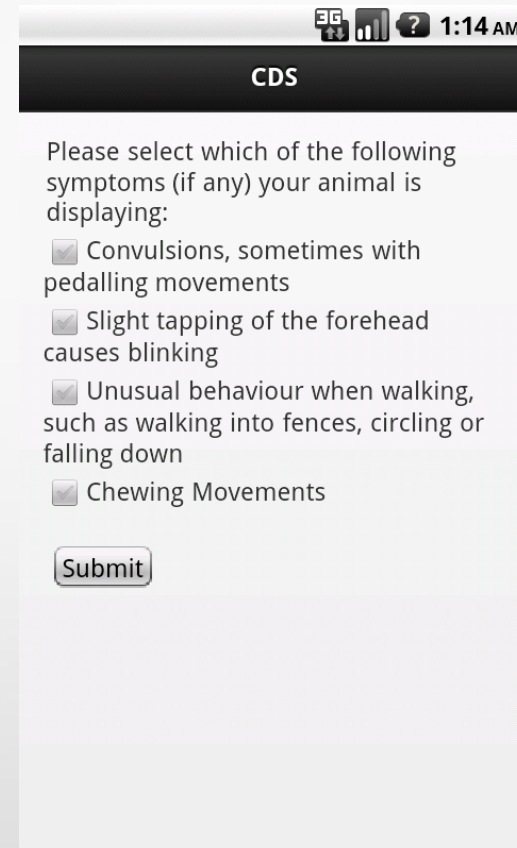

CDS

Please select which of the following broad categories of symptoms your cow has displayed (you'll be able to give more details later):

- Change in appetite
- Fever or Coughing
- External symptoms
- Internal symptoms
- Behavioural changes
- Digestive problems
- Unusual fluid excretions

Has there been rain in the past 2 weeks? Yes

Submit

CDS

Please select which of the following symptoms (if any) your animal is displaying:

- Convulsions, sometimes with pedalling movements
- Slight tapping of the forehead causes blinking
- Unusual behaviour when walking, such as walking into fences, circling or falling down
- Chewing Movements

Submit

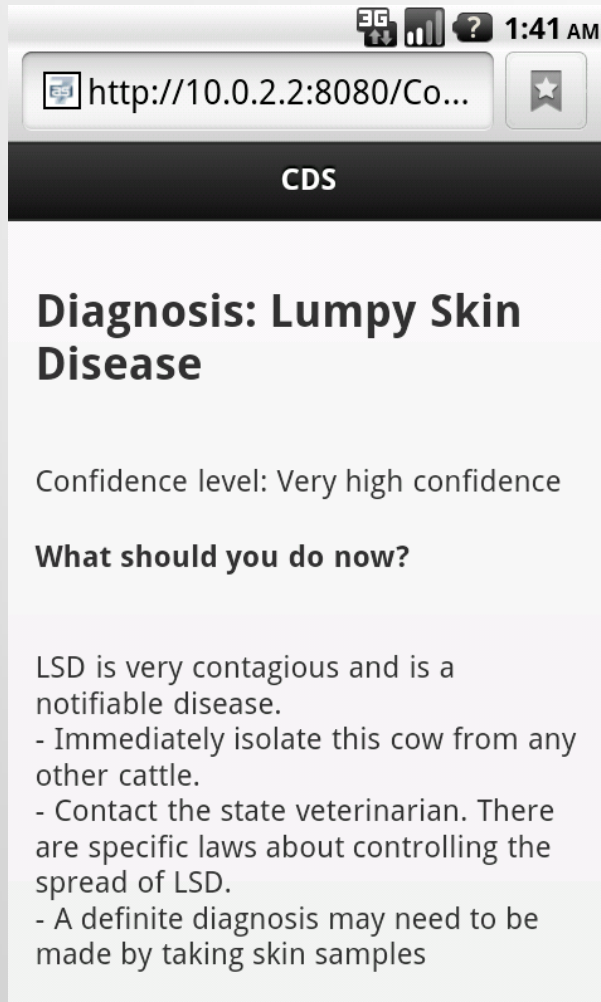

Results

- Diseases:
 - Lumpy Skin Disease
 - Heartwater
 - Asiatic Redwater
 - Gallsickness

Results

- Given all the symptoms for LSD
- No symptoms for another disease (not shared with LSD)
- Not vaccinated for any disease
- Not previously diagnosed with a disease
- No other cow has been sick recently
- **Diagnosis: LSD with Very High Confidence**

Results

The screenshot shows a mobile browser interface. At the top, there are status icons for signal strength, battery, and time (1:41 AM). The address bar contains the URL "http://10.0.2.2:8080/Co...". Below the address bar is a black header with the text "CDS". The main content area displays the following information:

Diagnosis: Lumpy Skin Disease

Confidence level: Very high confidence

What should you do now?

LSD is very contagious and is a notifiable disease.

- Immediately isolate this cow from any other cattle.
- Contact the state veterinarian. There are specific laws about controlling the spread of LSD.
- A definite diagnosis may need to be made by taking skin samples

The screenshot shows a mobile browser interface. At the top, there are status icons for signal strength, battery, and time (1:42 AM). The main content area displays the following information:

What should you do now?

LSD is very contagious and is a notifiable disease.

- Immediately isolate this cow from any other cattle.
- Contact the state veterinarian. There are specific laws about controlling the spread of LSD.
- A definite diagnosis may need to be made by taking skin samples

How should your cow be treated?

- LSD has no treatment. You can treat the symptoms but this will require a veterinary expert's guidance.

What should I do in future?

- Once a cow is older than 6 months, vaccinate it against LSD once a year.
- This will protect it against the disease

Results

- Given 4 shared symptoms for Heartwater and Redwater
- Heartwater vaccine recently given
- Given red urine as a symptom
- Initially: Heartwater, Redwater and Gallsickness
- Likely: Heartwater and Redwater
- Differentiation: Redwater
- **Diagnosis: Redwater with High Confidence**

Results

- Given 4 shared symptoms for Heartwater and Redwater
- Given red urine and chewing movements as a symptom
- Heartwater vaccine recently given
- Initially: Heartwater, Redwater and Gallsickness
- Likely: Heartwater and Redwater
- Differentiation: Undecided
- **Diagnosis: Heartwater with Low Confidence, Redwater is a distinct possibility**

Results

- Given 5 shared symptoms for Gallsickness and Redwater
- Given no differentiating symptoms
- Redwater vaccine given annually
- Initially: Redwater and Gallsickness
- Likely: Redwater and Gallsickness
- Differentiation: Undecided
- **Diagnosis: Gallsickness with High Confidence**
